Projects

CoinFolio

CoinFolio is a full-stack cryptocurrency web application designed to help users track their favorite coins and get a 7 day snapshot of the price. The app was built with next-auth, prisma, google provider for authentication, and trpc as a wrapper for serverless functions. The ui was built with tailwind for theming with dark and light mode.

Popcorn Tracker

Popcorn tracker is a full-stack movie tracking application that allows users to search movies and save them as watched or want to watch. The front-end was built using Typescript, React, Material UI. The back-end was built using Node, Nest.js, Typescript, and Postgres.

Skyline Media Marketing (Client Work)

Skyline Media Marketing is a digital marketing and branding company located in New York. They came to me looking for a website for their company that used the latest technology. I made this website using React, Gatsby, Style-components, and Netlify CMS for git-based content management.

Sticky Notes

Sticky notes is a full-stack note taking web application heavily inspired by the Microsoft sticky notes mobile app which allows users to create, update, and delete notes. The front-end was built using Typescript, React, Material UI. The back-end was built using Node, Nest.js, Typescript, and Postgres.

Portfolio Site - V 1

My portfolio was built to showcase projects and information that you might want to know about me. It includes a download link to my resume, featured projects, as well as a contact link connected to my email. This website was built with React, TypeScript, Next.js, Emotion JS for handling the CSS, and serverless functions to handle form validation.

Relevant Experience

IT Support Specialist @ Artec Manufacturing, Inc.

2013 – 2022 // Miami, FL

▷ Ensure organizational operations by providing network and technical support.

▷ Perform backups in critical business information and perform updates in organizations vital software.
